Welcome to your new Husky

Thank you for buying this Husky commercial chiller. It has been designed and manufactured for many years of trouble-free service.

Operation is very simple, but please take a few minutes to read this user manual. It contains important safety information, and tips to ensure you receive the best possible service from your Husky unit.

Important Notes

WARNING: RISK OF ELECTRICAL SHOCK HAZARD

If the power cable is damaged, it must be replaced by a qualified engineer to avoid shock hazard. **DO NOT ATTEMPT TO SERVICE THE ITEM YOURSELF.** Ensure that the unit is properly earthed. Stop using the chiller immediately if electric shock is felt when touching the cabinet.

DISPOSAL OF OLD CHILLERS

BE SURE TO MAKE ANY LOCKS UNUSABLE. IF POSSIBLE, REMOVE THE DOOR(S) AND DISCARD SEPARATELY.

WARNING – CHEMICAL HAZARD: DO NOT ALLOW CHILDREN TO PLAY WITH OLD CHILLERS. CONTACT YOUR LOCAL AUTHORITY FOR PROPER DISPOSAL PROCEDURES.

Before disposing of an old chiller, please make sure it is switched off and safe. Unplug the chiller and break any locks in order to avoid children becoming trapped.

Please note: the chiller system contains gases and refrigerants which require specialist waste disposal. The valuable materials contained in a chiller can be recycled.

Contact your local waste disposal depot for proper disposal of an old chiller and contact your local authority or dealer if you have any questions.

Ensure the pipework of your chiller is not damaged prior to disposal. You can contribute to the environmental awareness by insisting on an appropriate non-polluting method of disposal.

WEEE COMPLIANCE

Husky units are authorised to carry the CE (Conformité Européene) and WEEE (Waste Electrical and Electronic Equipment Directive) symbols.

The WEEE symbol on this unit indicates that the product must not be disposed of with household waste. To help prevent

possible harm to health and the environment, the product must be disposed of by recycling methods authorised as environmentally safe. For more information on how to dispose of this product appropriately, contact your dealer or the recycling department at your local authority. Husky units and their components undergo strict product testing by independent companies to comply or exceed all applicable local and international regulatory standards.

SAFETY INSTRUCTIONS & WARNINGS

Before switching on your Husky unit, read the information in this user manual carefully. The user manual contains important observations relating to the assembly, operation and maintenance of the unit.

Please keep this user manual in a safe place for future reference. If you ever sell this unit, hand this user manual to the new owner.

The manufacturer does not accept responsibility for any damages that may arise due to non-observation of these instructions.

- Do not use the unit if it is damaged. If you are in any doubt, consult an engineer.
- Connection and installation of your Husky unit are to be carried out in strict compliance with the relative instructions in this user manual.
- Make sure there is a suitable power outlet (230 volts, 13 amps outlet) with proper grounding to power the unit.
- For safety, the unit must be properly earthed in accordance with specifications.
- Always remember to unplug the unit before cleaning. Never unplug this unit by pulling on the power cable. Always grip plug firmly and pull straight out from the socket.
- All electrical repairs must be carried out by a qualified engineer. Inadequate repairs may be dangerous.
- Do not damage any parts of the unit which carry refrigerant by piercing, perforating, crushing, twisting or scraping. If refrigerant comes into contact with the eyes it may cause serious eye injury.
- Do not obstruct or cover the ventilation grille.
- Do not allow children to play with the unit, or to sit on it.
- This unit is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the unit by a person responsible for their safety.

BEFORE USING FOR THE FIRST TIME

IMPORTANT: Before switching the unit on, we recommend you allow it to stand upright for 8 hours. Failure to do this may result in damage to the unit.

- To ensure correct operation, it is important that the unit is level. The cabinet may be levelled by turning either or both of the adjustable feet in the front corners. Use a spirit level to check.
- Before operation, we recommend that the cabinet is cleaned for reasons of hygiene and to remove any residue left from manufacture.
- For good circulation, vents must not be blocked. Keep a minimum of 100mm of clear space around the chiller. Your Husky unit should be placed on flat and firm surface for quieter operation.
- Do not expose the unit to direct sunlight or a heat source such as ovens, radiators, heaters, etc.
- Do not under any circumstances place heated food or beverages in your Husky unit.
- Do not open the door more often than necessary to lessen the escape of cold air.
- For better air circulation, do not overfill the unit.
- Adjust the thermostat according to the amount of product and the ambient temperature.

IMPORTANT: This appliance is intended to operate in a climate where the maximum temperature is 25 degrees Celsius and the humidity do not exceed 60%.

Troubleshooting

Before calling Technical Support, please check the following points; you may be able to solve any problem yourself.

Problem	Possible Cause	Action
The chiller does not work properly.	The chiller is not plugged in.	Connect the plug to the power supply
	The plug and/or the power cable are faulty.	Call your supplier or a qualified engineer.
	The fuse has blown.	Replace the fuse with one of the same rating.
	The chiller is faulty.	Call your supplier or a qualified engineer.
The chiller's internal temperature is too high or too low.	The wrong temperature is selected.	Check the controller and adjust the set temperature.
	The factory default settings for the controller are incorrect.	Call your supplier or a qualified engineer.
	The condenser is blocked by an accumulation of dust.	Clean using a vacuum cleaner and soft brush attachment (see p8)
	The doors are not fully closed.	Check the unit is level and the seals are not damaged.
	The chiller is close to a heat source or the ambient temperature is too high.	Move the chiller to a better location and check it is out of direct sunlight.
	The ventilation grille is blocked.	Move the chiller to improve free movement of air.
The chiller is noisy in operation or makes unusual noises. • Note: It is normal to hear some noises as refrigerant flows through the compressor.	The chiller is not on a level, firm surface, or the unit may be touching other items.	Check location and position using a spirit level.
	The chiller is vibrating against a neighbouring object.	Relocate the chiller or the object.
Outer surfaces are wet	Chiller may be close to a water source or leak.	Dry surfaces thoroughly and move the chiller.
Inner surfaces are wet	The door may be opened too often or kept open too long.	Try to minimise opening of the doors for better cooling performance.

Operating Instructions

TO OPERATE THE ELECTRONIC THERMOSTAT

REFRIGERATION LIGHT DEFROSTING LIGHT

The thermostat has been pre-set, and in most cases it is not necessary to adjust the settings. When the unit is operating normally, the display will show the current temperature.

To display the set temperature press the **SET** button. Press the button again to return to normal operation.

To set a new temperature, press **SET**. The display will flash and the current set temperature will be displayed. Press the  button to increase the set temperature, or press the  button to decrease the set temperature. Press the **SET** button to save the new setting. The display will flash with the new value and then revert to display the cabinet temperature.

Please note:

1. When the chiller is connected to the mains for the first time there will be a short delay before cooling starts. During this time the Refrigeration Light will flash. After the short delay, cooling will begin and the Refrigeration Light will be illuminated. When the chiller reaches the set temperature, the Refrigeration Light will be off.
2. If you do not press any button, after six seconds the thermostat will return to its normal display.

INTERIOR LIGHT

The interior light may be switched on or off using the rocker switch on the inside right-hand wall of the cabinet (see Fig. 2 on page 7).

DEFROSTING

The unit defrosts automatically at preset intervals. If however the door is opened too often, or if the unit is in a location with high humidity, or if the contents are changed more frequently, it may be necessary to defrost the unit manually. To start or stop manual defrosting, press the  button for six seconds. The Defrosting Light will be illuminated. Melt water runs to a container placed in the compressor compartment and evaporates. After defrosting is complete, the unit will return to normal operation.

Ladder rack

Shelf clip

To access the compressor compartment:

- i. Remove the two screws.
- ii. Push the removable panel down slightly to free it from the securing flange.
- iii. Angle the removable panel forwards and down to remove it.

REPLACING LED LIGHTS

1. Disconnect the chiller from the power supply.
2. Remove the light cover; pull out the wires and remove the LED lights.
3. Install the new LED lights, connect the wires, and replace the light cover.
4. Reconnect the chiller to the power supply.

INSTALLING SHELVES

Fit the shelf clips to the ladder racks (see Fig. 3 on page 7) and install the shelves horizontally. Ensure the clips are located firmly and the shelves are secure before loading the chiller.

EASY MAINTENANCE ACCESS

Switch the unit off and disconnect from the mains supply. To access the compressor compartment, simply remove the screws securing the rear access panel – see Fig 4 on page 7. Any repairs or maintenance, other than CLEANING (see below) must be carried out by QUALIFIED ENGINEERS ONLY.

CLEANING

If the condenser coil is not cleaned quarterly, the energy efficiency of the appliance will decrease significantly and it will reduce the life of the appliance. Switch the unit off and disconnect from the mains supply. See 'Easy Maintenance Access' how to access the compressor compartment. Use a vacuum cleaner fitted with a soft brush attachment to remove dust carefully from the condenser, the components and grilles – see Fig 5 on page 7.

The external and internal surfaces of the unit should be cleaned regularly. Switch the unit off and disconnect from the mains supply. Clean the external and internal surfaces of the unit with a mild soap solution, then wipe dry. Do NOT use cleansers containing chlorine or other harsh cleansing agents, as these can damage the stainless steel surfaces and components. Use mild soapy water to clean the gasket and seals.

GETTING SERVICE ASSISTANCE

The cooling system is a hermetically sealed circuit and does not require any maintenance other than regular cleaning (see 'Cleaning').

If the unit fails to work, first check the power supply. If you cannot locate the reason for the failure, please contact your supplier, stating the model and serial number of the cabinet. You may find this information on the rating plate, which is affixed inside the unit on the top right-hand interior wall.
